Summary

Software Developer (B.Tech, AI & Data Science) with hands-on experience building MVC-based Java and Spring Boot web applications, RESTful web services, and microservice-style back ends, alongside production Android and web apps. Strong grounding in Java, object-oriented design and service-oriented architecture, with experience across the full development life cycle: requirements, technical design, testing, and delivery. Joined a start-up as the second engineer on its founding tech team and went on to mentor incoming engineers as the team grew; communicates clearly with senior developers, founders and clients.

Education

Guru Gobind Singh Indraprastha University **2022 – 2026**
Bachelor of Technology in Artificial Intelligence and Data Science *CGPA: 7.4*

Technical Skills

Core Languages: Java, Kotlin, JavaScript (ES6+), TypeScript, SQL, C, C++
Java & Back End: Java, Spring MVC, Spring Boot, RESTful Web Services, Microservices, SOA concepts, Maven, Gradle
Front End: Next.js, React, JavaScript (ES6+)
Mobile: Android (Kotlin, Jetpack Compose, XML Views)
Databases: PostgreSQL, MongoDB, Firebase
Testing & Tools: Test planning, API testing (Postman), Git, GitHub, Docker, AWS (basics)
Architecture: OOP, MVC, MVVM, Clean Architecture

Experience

Concept Kart Private Limited **May 2026 – Present**
Full Stack Software Engineer *Delhi, India*

- Joined as the **second engineer on the founding tech team** of a start-up; built the company's e-commerce systems from the ground up, including native Android app **MyAudiocular** (Kotlin, MVVM) and web platform **myaudiocular.com** (Next.js).
- Integrate secure **REST APIs / web services** for real-time inventory synchronization, media playback, and checkout flows across mobile and web.
- **Guided and mentored incoming engineers** on codebase architecture and delivery practices as the team grew, working closely with the senior developer and coordinating delivery across mobile and web.

Picturetime Digiplex Pvt. Ltd. **Feb 2026 – May 2026**
Full Stack Developer (Android and Web) *Delhi, India*

- Engineered cinema ticket booking workflows with interactive seat selection and row-based mapping for the web platform **picturetime.in** and mobile app.
- Developed a Next.js administrative portal with event management, category-based filtering, and automated Excel data export; verified booking and API flows with Postman.

Knowledge Excel Private Limited **Aug 2025 – Oct 2025**
Generative AI Intern *Delhi, India*

- Built Python backend microservices for LLM-driven conversational workflows using LangChain and LangGraph.
- Developed Retrieval-Augmented Generation (RAG) pipelines using the Chroma vector database and embedding search, with Pydantic validation.

Projects

AI-Powered Influencer Management Portal **marketing.conceptkart.co.in**

- Built a portal for the marketing team to manage all influencer data in one place, with a **dashboard** tracking product return status, **barter vs. paid** collaborations, and total spend per influencer.
- Added an **AI-based check** that detects whether a YouTuber has published a review video on their channel, replacing manual channel-by-channel verification.

Asset Allocation & Project Management Portal → HRMS **hrms.conceptkart.co.in**

- Built an asset allocation portal and a project management portal, then integrated both into a **Human Resource Management System** with role-based dashboards.
- HRMS features include employee records, **activity logs**, and automated reminders for employee birthdays and company events.

Leo: In-Store Product Assistant Chatbot **leo.conceptkart.co.in**

- Built **Leo**, a chatbot for Concept Kart's offline store where customers search products, ask for specifications directly, check **real-time stock availability**, and compare products side by side.

Achievements

Hackathon Award (2023): Placed 3rd at Hackunicorn Hackathon for building an AI-powered catering web application.

Freelance Projects (2024–Present): Delivered 3+ client platforms including the Moksh Foundation NGO site and startup dashboards.
